

# WoundPedia

## Education Foundation

# Toolkit

A simple tool kit that makes a world of difference!

The WoundPedia Education Foundation is focused on raising funds for the WoundPedia Skin & Wound Care Toolkit. Developed in collaboration with healthcare professionals in community settings, it is supported by virtual skills training videos and educational sessions. The WoundPedia Skin & Wound Care Toolkit is a practical, easy to use resource to the management of lower limb disorders, especially diabetic foot ulcers.

The four simple components are:

- 1) **Audible Handheld Doppler** – provides assessment of vascular health.
- 2) **Infrared Thermometer** – provides an indication of potential foot infection.
- 3) **Monofilament** – providing indication of sensory capabilities of the foot.
- 4) **Offloading surfaces** (either pad or shoe) – providing relief from damaging pressures on the foot.

Alongside some educational enablers, the WoundPedia Tool Kit provides valuable resources in the fight against amputation!

“Your donation will not only help save limbs and lives, but also give patients in our community a better quality of life.” Dr Gary Sibbald, WoundPedia
